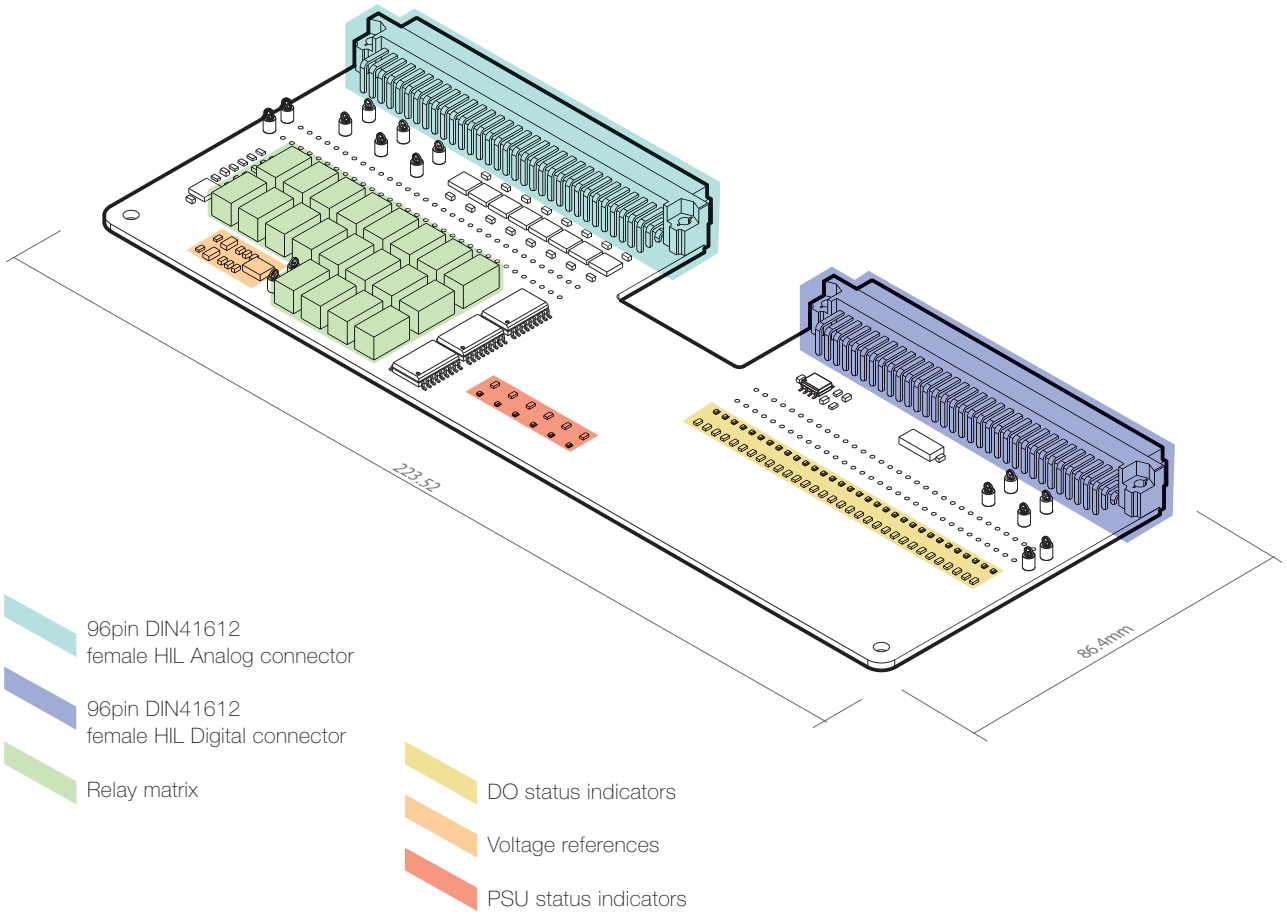
HIL6 Calibration Card

Keep your HIL running in top shape.

Get Started:
Scan for Full Documentation



Features and Benefits

- Testing and Calibration done in a single click
- Gain and offset errors reduced to factory default
- Activity indicator LEDs on all HIL Digital Outputs
- Reference measurement report shipped with each Calibration Card

Technical Details

On board voltage reference	+4.096 V, -4,096 V
Voltage reference stability	40 ppm @ 1k hours
Voltage reference temperature coefficient	10 ppm / °C
Power source	10 ppm / °C

Application

Plug the Calibration Card into your HIL and it will precisely measure every analog input and output channel's offset and gain errors, and keep your HIL devices operating at their highest level of performance.

In the background, your HIL device will test analog inputs by measuring the Calibration Card's voltage references. Afterwards, the analog outputs are tested via analog inputs, so that once everything is complete, you can be sure that you HIL is performing as intended.

Thank you!

Your order made our day, and we hope our package returns the same favor.

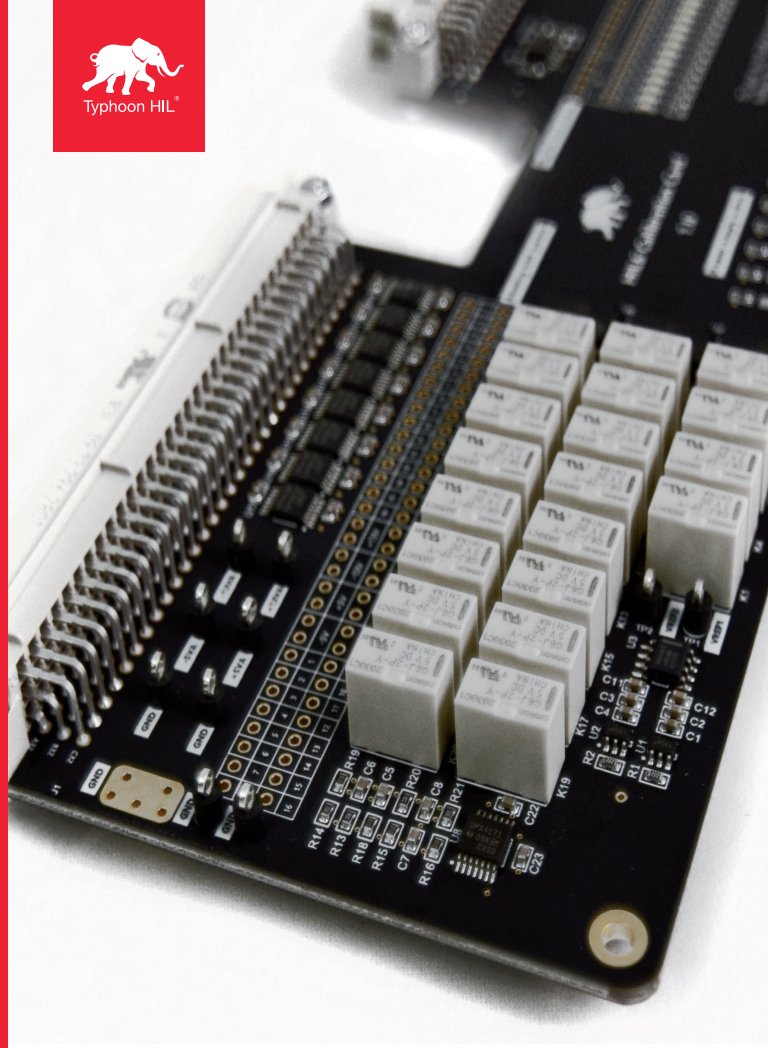
Typhoon HIL®



HIL6 Calibration Card

Calibration card for 6-series HIL devices.

- ☑ No additional tools required.
- ☑ One click calibration.
- ☑ Plug and Play.
